

Practices and representations related to fermented plant-based food in Europe: from traditional uses to contemporary innovations.

Thèse

PhD :

Preview :

HealthFerm is a European research project investigating innovative pulse and cereal-based food fermentations together with the health effects and consumer perception of novel fermented foods. Within this project, Maxence Blanchet's PhD. project aims at exploring the relation to fermented food products in a global manner, including practices, representations and values. It includes traditional practices as well as contemporary innovations. The target includes all European countries, with a focus on France, Sweden and Romania with an in-depth qualitative approach.
