Year 2022

- **End of the CANUT project "CAnCER, NUtrition & Taste" coordinated by the Institut Paul Bocuse Research Centre.**

Published on November 4th, 2022.

Disgust, hypersensitivity, false taste, loss of motivation... Chemotherapy treatments can induce this type of disturbance in patients and change their food preferences. Through phase 1 of the CANUT project, we sought to better understand these mechanisms and to develop, test and deploy adapted solutions.

- In partnership with the Institut Paul Bocuse Research Centre, Lesaffre publishes "Fermentation", a book to raise public awareness on the benefits of fermentation

Published on March, 23rd, 2022

Through this book, published by Flammarion and produced in partnership with the Institut Paul Bocuse, Lesaffre's aim is to provide a better understanding of the tremendous contribution of fermentation thanks to micro-organisms such as yeast and bacteria, pioneers of life on Earth and omnipresent in our environment. The fermentation process, once limited to food preservation, has now become an answer to preserve and better feed the planet.

LE MAG DE LA SAN⁺É

- **TV Report « Alimentation : comment se nourriront les consommateurs dans le futur ? » - Franceinfo**

"How will we feed ourselves in the future? The question also sounds like a challenge: to feed 10 billion people by 2050. The future may well be insects."

At the Institut Paul-Bocuse Research Centre, chefs Marie Natalizio and Julien Ferretti are thinking about the food of tomorrow.

A few metres away, customers are having lunch under the gaze of the cameras. Audrey Cosson, a food scientist, observes their behaviour and reactions.
